## 1. Introduction

Mitsubishi DX-PC25U is viewing software designed for the Digital Video Recorder (DVR) DX-TL2500U. This software enables you to connect and communicate via a network with the DVR and also to playback saved images (saved on CFC or CD from DVR) on your PC

- ▶ View live or playback video of all cameras connected to the recorder.
- ▶ Search for a specific video Date&Time, Alarm or Recording Index.
- ▶ Save a still picture as a bitmap or JPEG format. It is also possible to convert the still pictures into AVI format.
- ▶ Control functions of the recorder and PTZ camera remotely.
- ▶ Change the setting of the recorder via network.

### 1.1 Product Features

- View live images across a network in full or split screen mode.
- Control PTZ cameras
- View recorded images across a network with split screen modes, Search via Fast Forward, Rewind, Time and Date or Alarm List.
- Copy images to the user's PC.
- Receive alarms notice
- Control and SETUP menu of DX-TL2500U from a network.

### 1.2 System requirements

- IBM PC/AT-compatible with Intel Pentium series or Intel Celeron series CPU (500MHz or faster)
- Microsoft Windows 98SE, Windows 2000, Windows Me or Windows XP
- RAM: 256MB or more
- Display resolution: 1024 pixels x 768 lines (XGA) or more (recommended). Use a video card and monitor capable of displaying 32,000 or more colors.
- Free HD space: 200MB or more
- SCSI adapter : Adaptec AHA-2940 Series, SlimSCSI etc. compatible with WINASPI32 and SCSI-2 (when SCSI-connected peripheral devices are used) Under Windows 2000, WinASPI must be installed in advance for the playback of SCSI-connected devices. Please read the instruction manual for Adaptec SCSI board for the installation of WinASPI.
- Sound adapter : Windows-compatible type; SoundBlaster etc.
- Installed browser: MS Internet Explorer 5.01 Service Pack 2 or later
- Network interface (10Base-T) card compatible with the environment described above

Note: Operations are not guaranteed for all environments conforming to the above description.

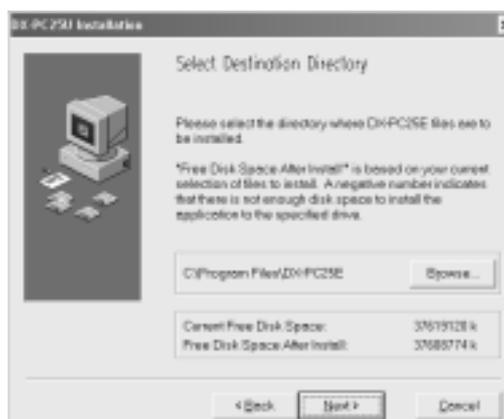

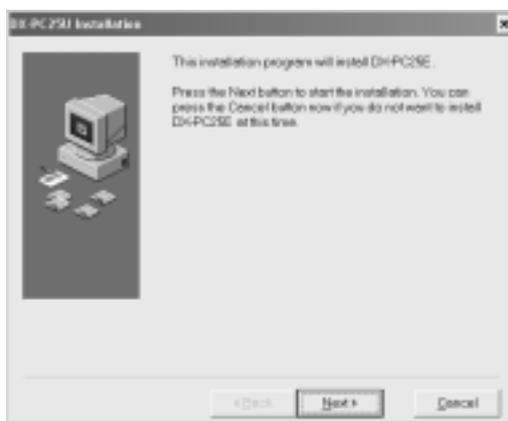

## 1.3 Compatible Digital Recorders

- DX-TL2500U
- DX-TL900U Series (Playback of copied data on digital storage media only. Some of the functions may not work properly.)

## 2. Installation

### 2.1 DX-PC25U Installation

To install the DX-PC25U, first start up SETUP.EXE on the provided CD. Follow the series of instructions that appear on-screen, and then the software will be installed automatically.  
The default directory for the installation is C:/Program Files/DX-PC25U.

### 2.2 Uninstalling

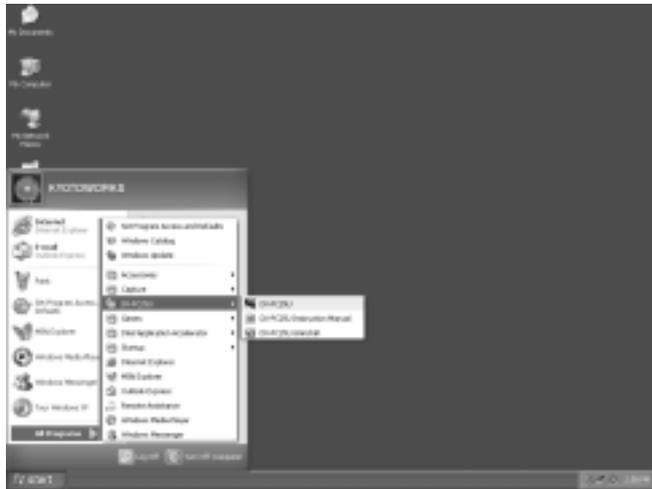

To uninstall DX-PC25U, open the Install/Remove Applications dialog box in the Operation Panel and select DX-PC25U for deleting or select the Uninstall DX-PC25U command from the Start menu, and follow the series of instructions that appear on-screen to complete the procedure.

### 3. Connecting to a DX-TL2500U and Viewing live Video

#### 3.1 How to connect

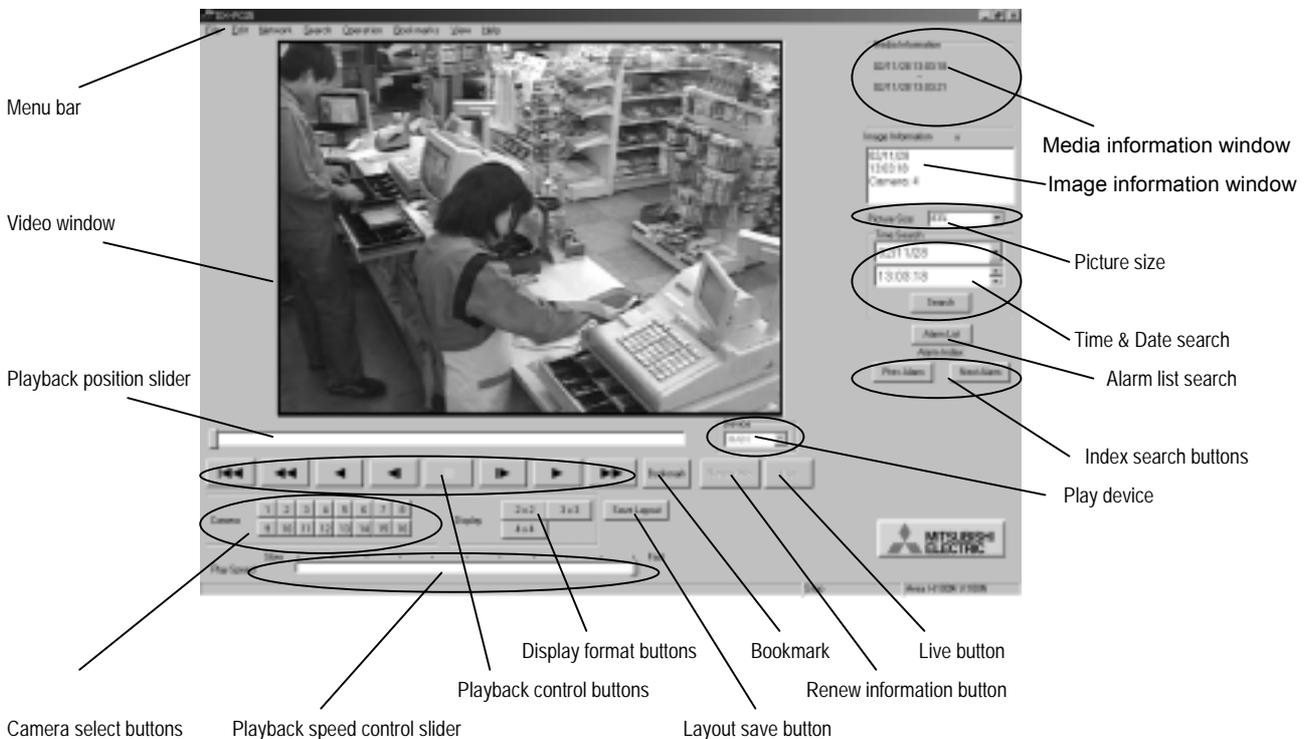

##### 3.1.1 Starting DX-PC25U

After the program installation, go to Start Menu of Windows and choose DX-PC25U from the menu.

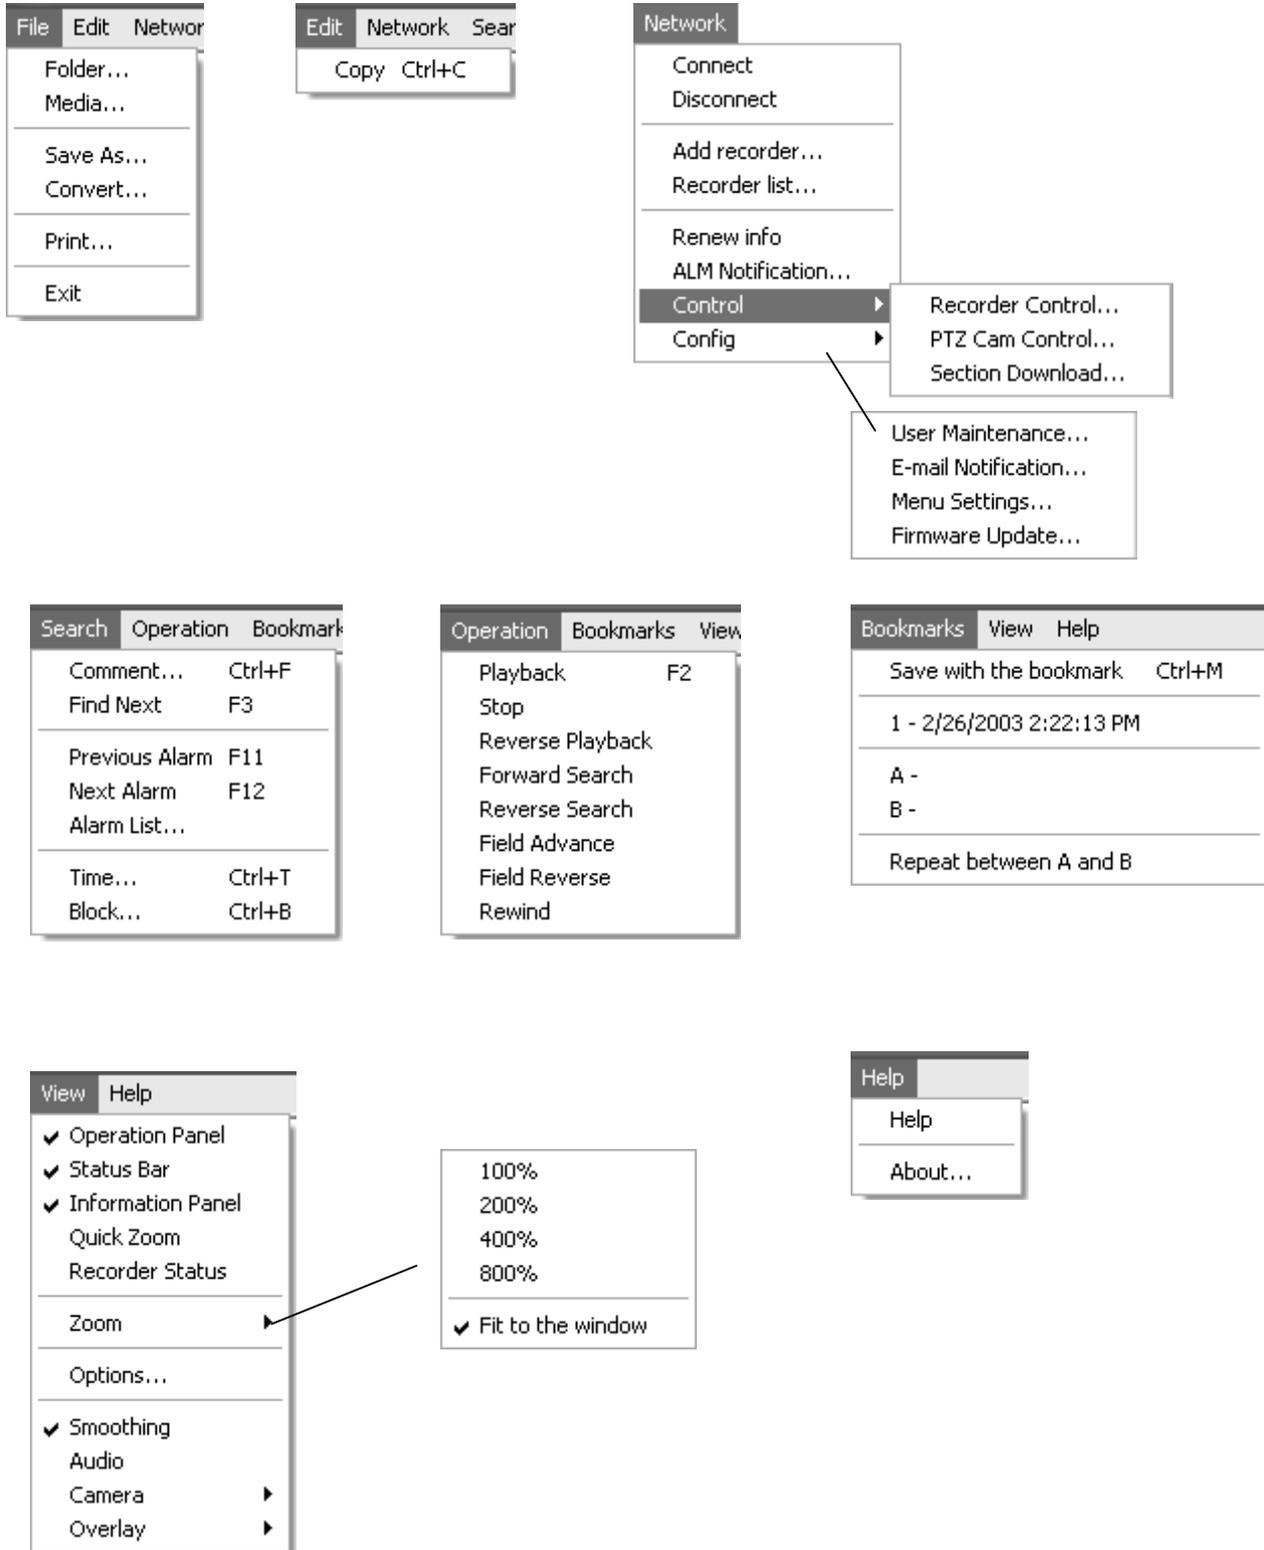

Then the DX-PC25U starts and opens control panel.

#### Control panel

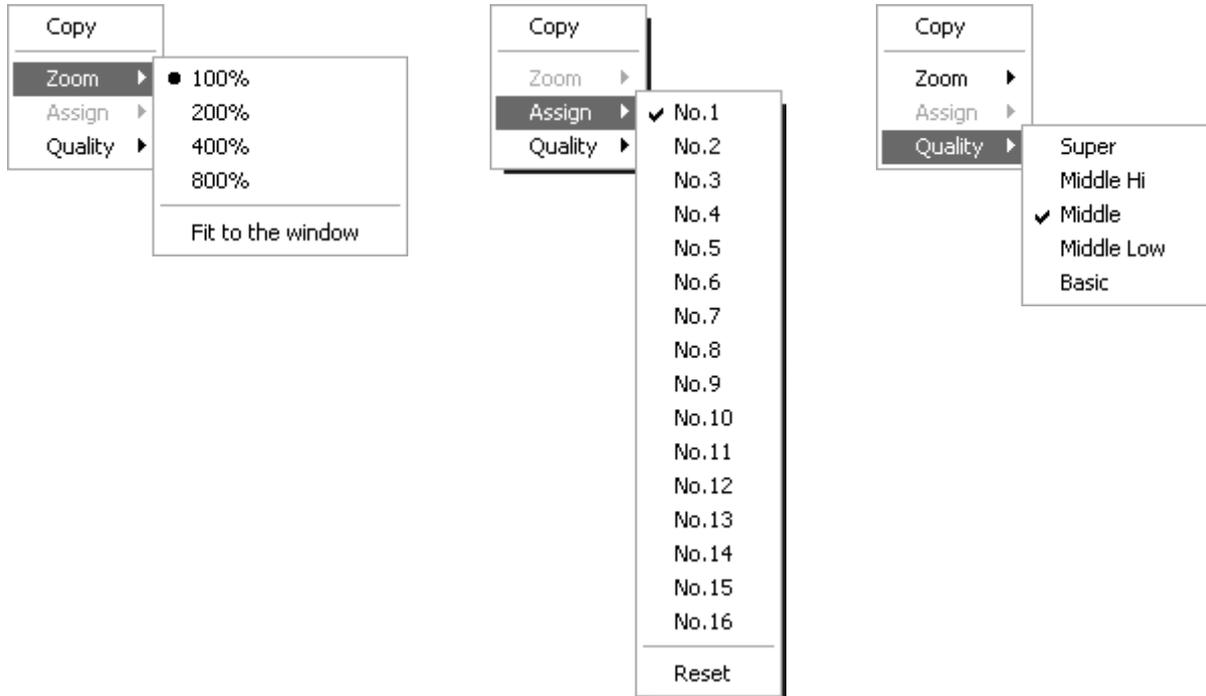

## Commands in menu bar

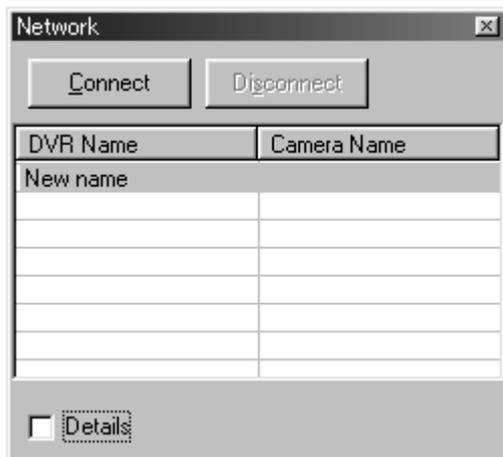

---

## Commands in video window

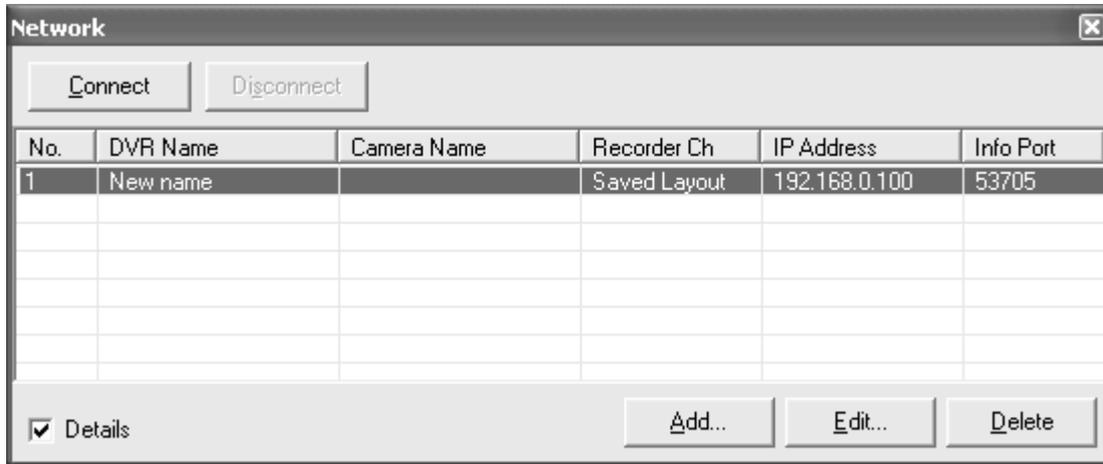

### 3.1.2 Setting up connection

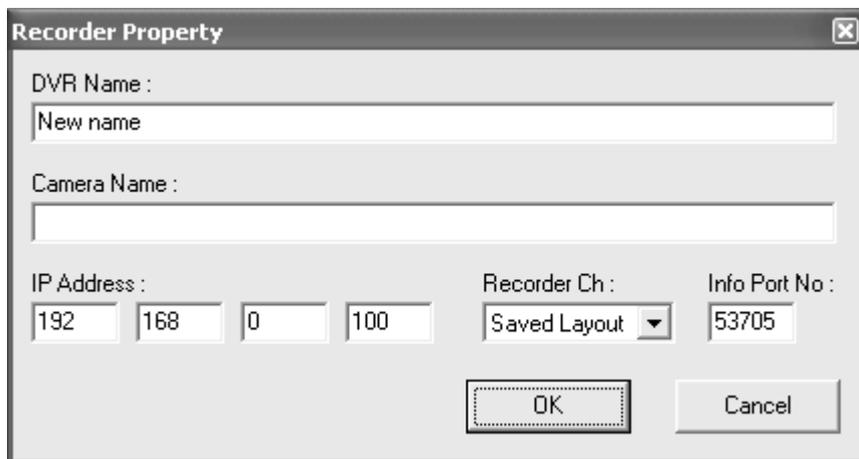

When you start the DX-PC25U, you see the Network box.. To view all the settings of the listed recorder or to register a new recorder, click the check box of Details.

default setting is IP address; 192.168.0.100, and Info Port; 53705, which are same as DX-TL2500U's default setting.

- To register new recorder, click Add button.
- To change the setting of registered recorder, choose the recorder name you wish to change, then click Edit button.
- To delete the registered recorder, choose the recorder name you wish to delete, then click Delete button.

- DVR Name : To name the registering DVR your favorite.
- Camera Name : To name a camera connected to a recorder onto the list.
- IP Address : Input the recorders IP address.
- Recorder Ch : You can choose either specific camera channel or saved layout. The default is 4x4 multi picture format.
- Info Port No : Input the recorder's port number into this box.

### 3.1.3 Connecting

Select your desired recorder and click on the Connect button to display Login box. Enter your User Name and Password as required and click OK button.

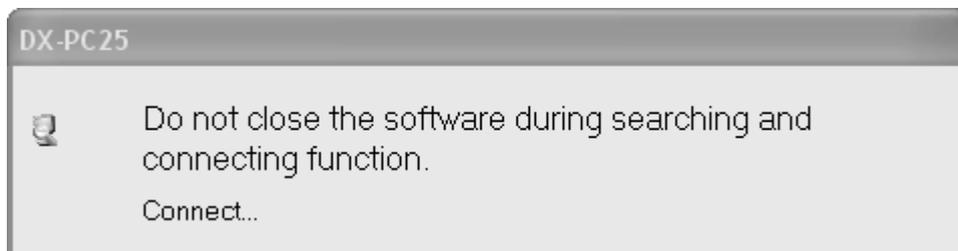

Note. The default user name is **root** and password is **admin000**.

User name and password can be changed for each user.

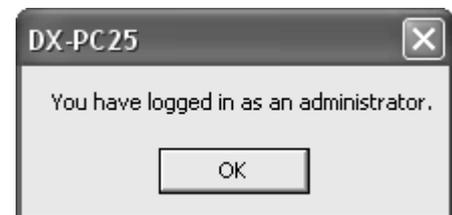

When Login failed, Error message appears "Input Error"  
When the specified recorder can't be found, Error message appears "Recorder not found".

When you logged in successfully, the following message appears, and DX-PC25U

DX-PC25U connected to the recorder successfully, the following dialog box appears and tells you what kind of qualification you logged in.

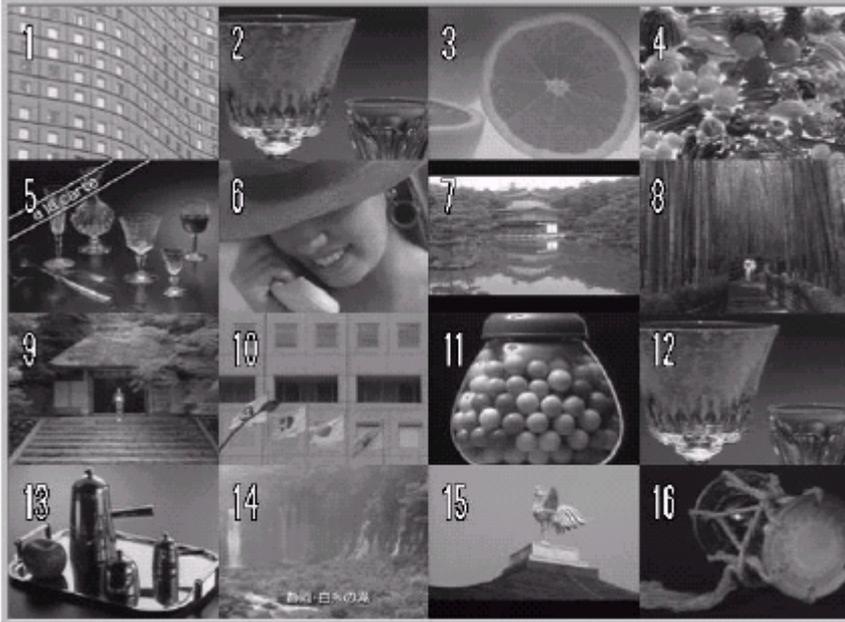

---

### 3.2 Viewing Live Video

Live pictures can be viewed in a single or multi picture format.

Note: Selecting multi picture format may slow down the refresh rate on the display.

#### Example of 16-Split Format

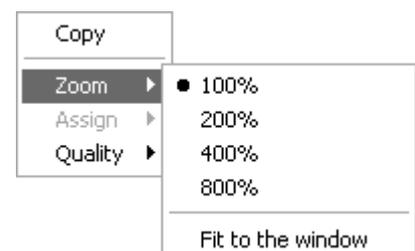

In the Multi Picture Format, the camera number changes from green to yellow to indicate just updated picture. By clicking the primary mouse button (“left clicking” in the standard setting) on a picture displayed in the video window, the Multi Picture Format can be changed to a Single Picture Format. By clicking the secondary mouse button (“right clicking” in the standard setting) on any part of the video window, the following menu can be opened.

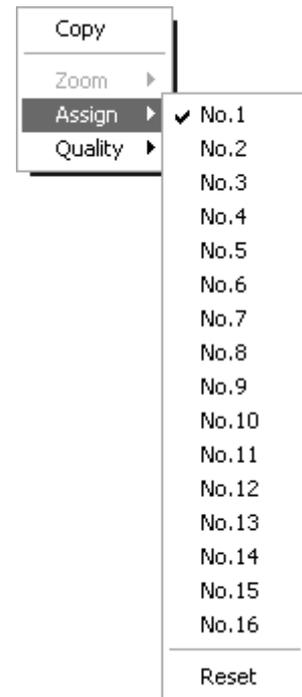

### 3.3 Zooming Live Picture

Place a cursor on image and right click to zoom live picture in a full screen mode. Select Zoom and check a desired zooming rate. Back to the original, right click again to display Zoom command and check Fit to the window.

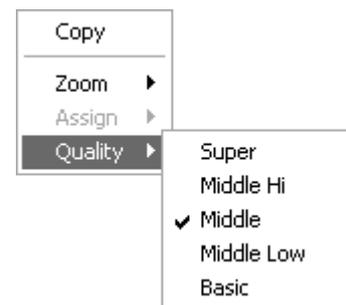

### 3.4 Assigning Camera Position

By selecting camera number from the Assign list, any cameras can be assigned to the position you have selected. The assigned camera number gets saved in the registry, and will appear in that position at the start of the next session.

### 3.5 Changing Picture Quality

The initial pictures are transmitted at Middle quality to speed up the picture refresh rate. Place a cursor on the video window and right click to change image quality. Select Quality and choose a desired image quality.

Note:

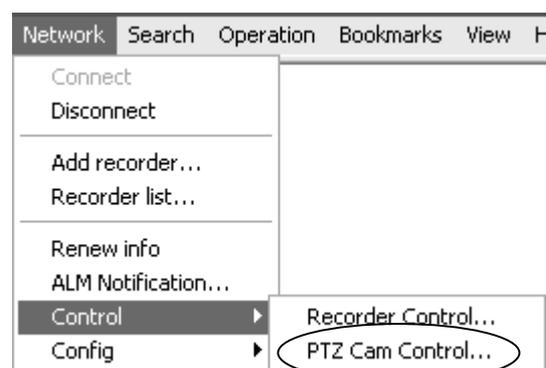

If the same camera number is assigned onto the several positions in the video window, these pictures will be updated at the same time.

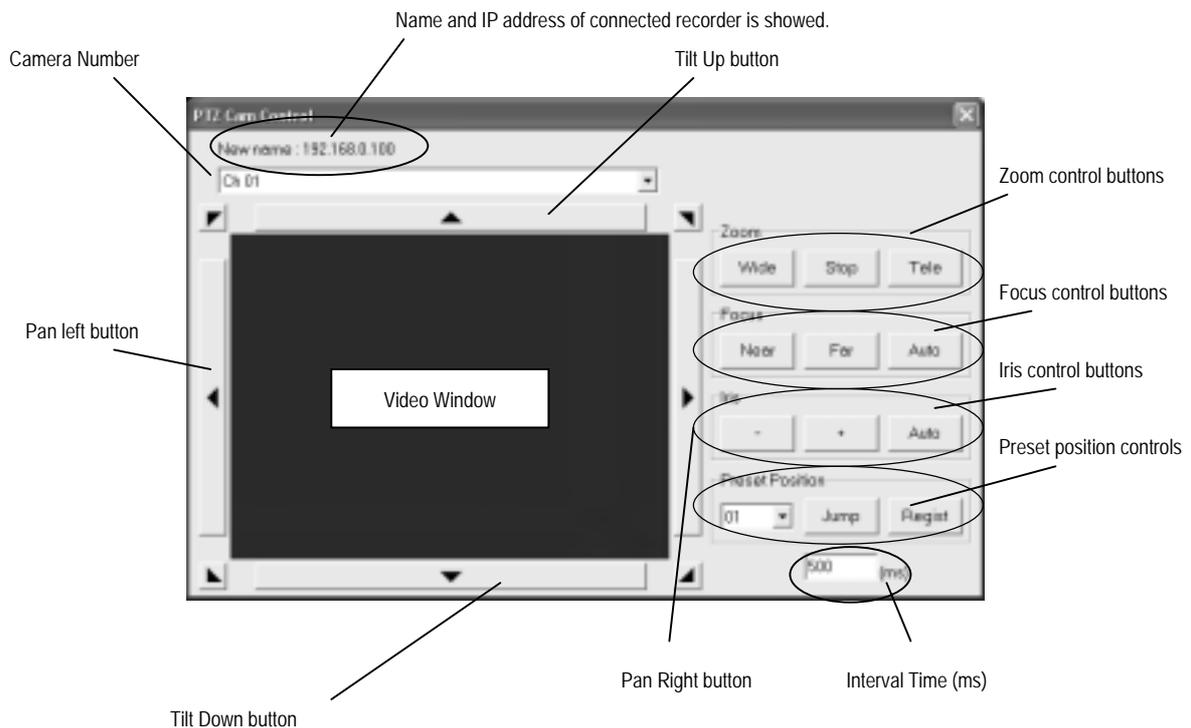

### 3.6 Controlling PTZ Camera

PTZ Cameras can be controlled by using DX-PC25EU Stop viewing live pictures by clicking LIVE button before open the camera control window.

To control PTZ Camera;

- (1) From the Network Menu, choose CONTROL.
- (2) Choose PTZ Cam Control.

- Camera Number : Choose the camera you want to control.
- Panning : Click ◀ or ▶ button to change the camera angle in horizontal direction.
- Tilting : Click ▲ or ▼ button to move camera to vertical direction.
- Panning + Tilting : Click ◢ or ◣ or ◤ or ◥ button to move camera to horizontal + vertical directions (PAN & Tilt). When you find any problem at the one of the direction, please change the interval time between PAN command and Tilt command.

(1) Zoom control

- Wide button : To start zooming out, press this button.
- Tele button : To start zooming in, press this button.
- Stop button : To stop zooming, press this button.

(2) Focus control

- Near button : To focus the lens on one step near side, press this button.
- Far button : To focus the lens on one step far side, press this button.
- Auto button : To activate Auto-Focus function of the lens, press this button.

(3) Iris control

- ( - ) button : To close the iris, press this button. Then the iris level becomes 1 step lower.
- ( + ) button : To open the iris, press this button. Then the iris level becomes 1 step higher.
- AUTO button : To activate auto iris control, press this button. Then iris level is controlled automatically.

(4) Preset position control

- To register a new preset position, choose a position number and press Register button.
- To point the camera toward the desired preset position, choose a position number and press Jump button.

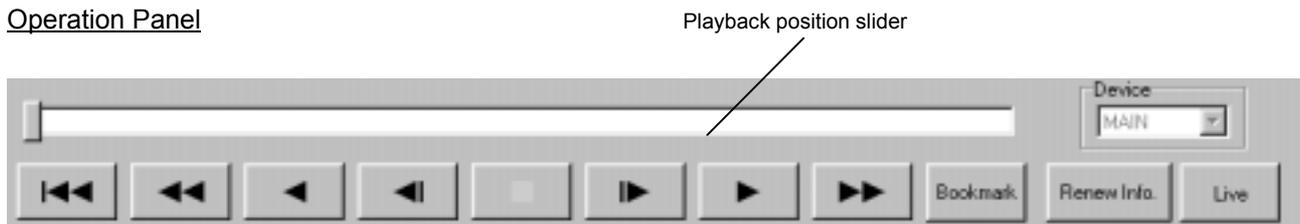

#### 4 Search and viewing recorded Video

##### Playing back recorded video

Video can be played back from the Digital Recorder by using DX-PC25U.

Playback buttons are at the bottom portion of Main Window. Each of the buttons has a different function as described below.

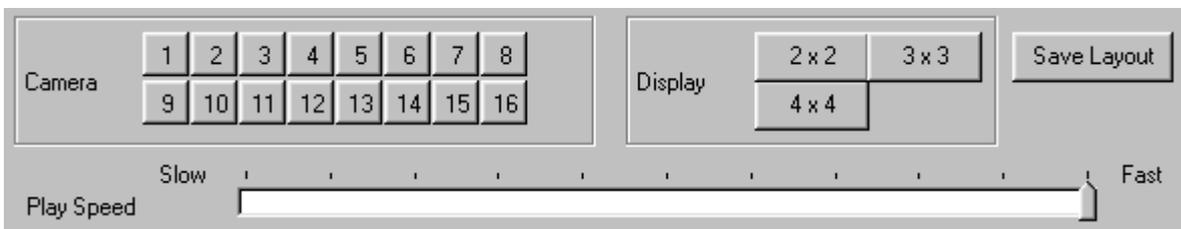

##### Operation Panel

##### Control Icons

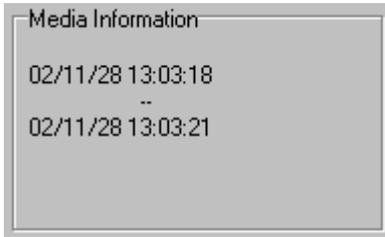

Icons	Functions	Descriptions
	Top Search	Jumps to the beginning of the recording.
	Reverse Search	Plays the video toward the beginning of the recording with a higher speed than normal playback. The search speed is changed from X1 > X2 > X4 > X8 to X1 again every pressing.
	Reverse Playback	Plays the video toward the beginning.
	Field Reverse Shift	Plays a still picture one field before.
	Stop	Stops to playback, and start to playback audio data, if it is recorded with the picture, when audio command is activated in the menu.
	Field advance Shift	Plays a still picture one field after.
	Play	Plays the video.
	Search	Plays the video toward the latest recording with a higher speed than normal playback. The search speed is changed from X1 > X2 > X4 > X8 to X1 again every pressing

	Device	Allows you to select playback device.
	Bookmark	Registers the picture displayed in the video window onto the bookmark list.
	Live	Shows Live pictures. Audio is not played in Live Mode.
	Renew Information	Renews the information.
	Position slider	Shows position of the picture in the video sequence.

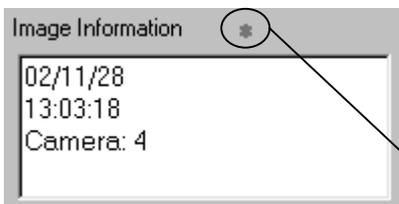

Icons	Function	Descriptions
	Camera number	Changes the camera displayed in the video window. If more than two cameras are selected in a single picture format, those camera pictures are switched sequentially. To select several cameras in single picture format, press the your favorite camera number with pressing Ctrl key on your keyboard. You can select the only available cameras in live mode.
	4-Multi	Changes the display format in the video window to 4-Multi. The display is changed from 4a > 4b > 4c > 4d > 4a again every pressing. In default setting 4a contents from 1 to 4 channel, 4b (5 to 8ch), 4c (9-12ch) and 4d (13 -16ch).
	9-Multi	Changes the display format in the video window to 9-Multi. The display is changed from 9a > 9b > 9a again every pressing. In default setting 9a contents from 1 to 9 channel, and 9b from 10 to 16ch, 1ch and 2 ch.
	16-Multi	Changes the display format in the video window to 16-Multi.
	Playback Speed Slider	Allows you to adjust playback speed or to adjust request rate in Live Mode.
	Save Layout	Allows you to save your favorite display format in the video window.

## Media Information box

**Media information box displays recording period on the selected device.** If a SCSI device is selected, the name of this device is also displayed in this box.

## Image Information Box

The recording data such as recording date, time and camera number and comment (if it is written.) are displayed in this Image information box.

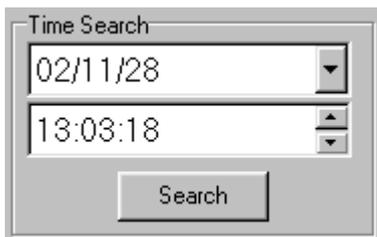

If an alarm picture is played in the video window, a red dot will appear

## Picture Size

To change the size of video window, input the size in %. The size can be changed from 25 – 800%.

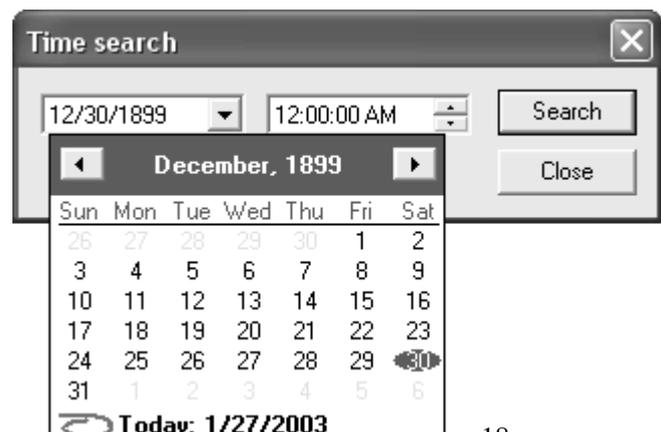

## 4.5 Time and Date Search

This function is to search for a specific scene according to its recorded date and time information. To search the scene, just input the date and time you want to see and then click the Search button. PC25U displays a picture recorded exactly at the required time or if nothing available for the provided time, it will display the nearest recorded time.

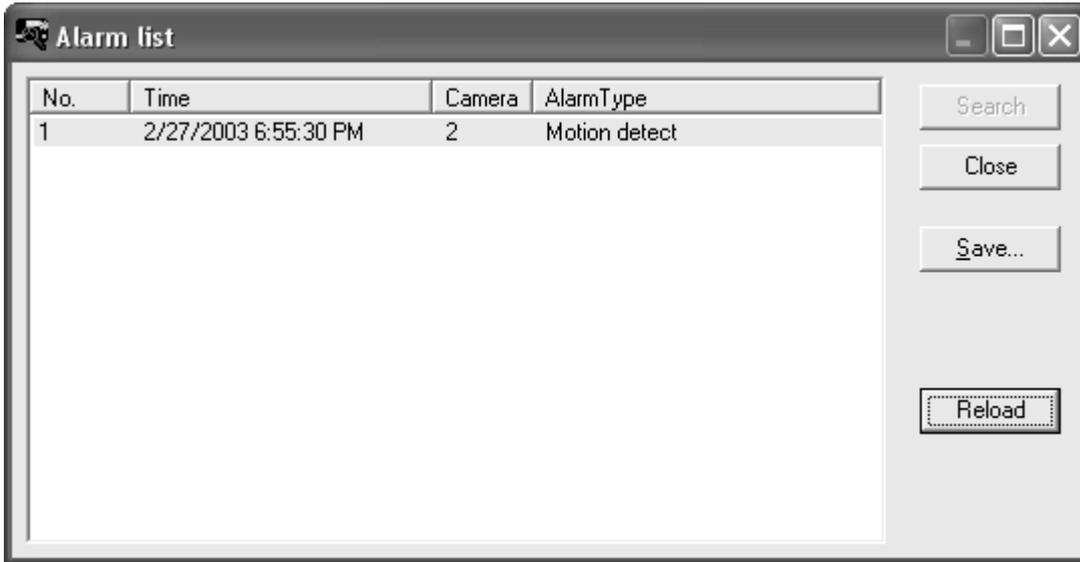

To open time search box,

- Choose Time from Search Command in the menu bar.
- Choose Date and Time you want to see, and press Search button to search the picture.
- To close this box, press Close button.

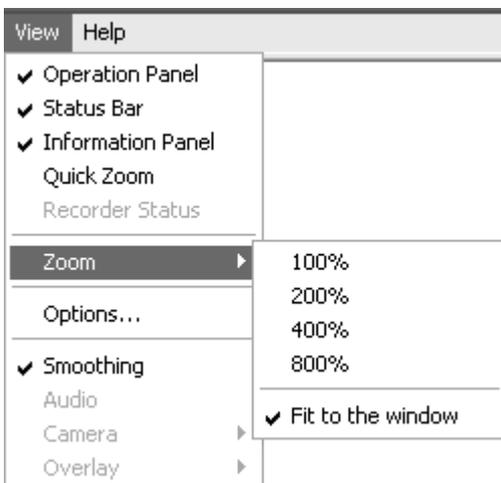

#### 4.6 Alarm List Search

- To search for a specific Alarm, press the Alarm List button and choose the Alarm number you want to see, and then press Search button.
- To close the Alarm list box, press the Close button.
- To save the alarm list as a text file press the Save button.
- To update the list press the Reload button.

#### 4.4 Zooming Image during play back (Same operation as Live image zooming)

Place a cursor on image and right click to zoom live image in a full screen mode. Select Zoom and check a desired zooming rate (25 – 800%). Back to the original, right click again to display Zoom command and check Fit to the window.

## 5 Copying images to a local PC

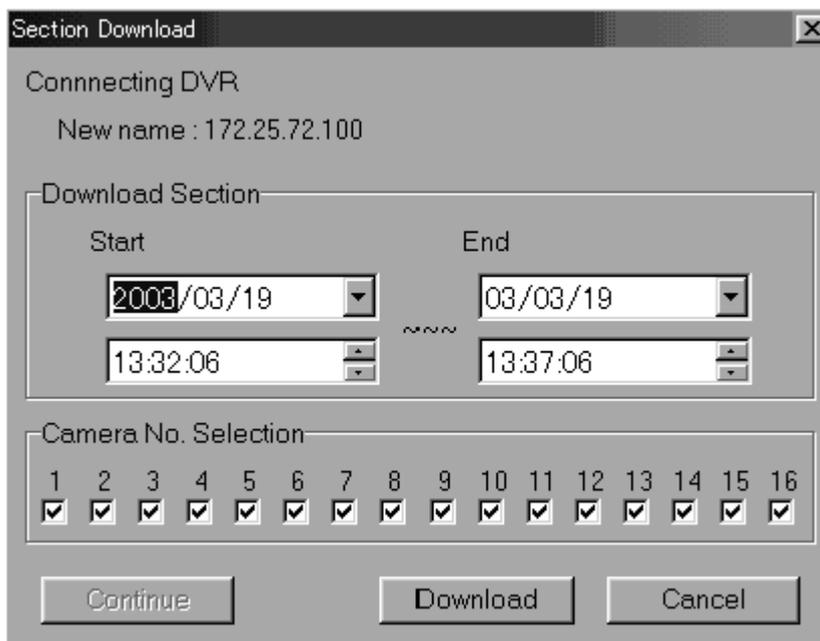

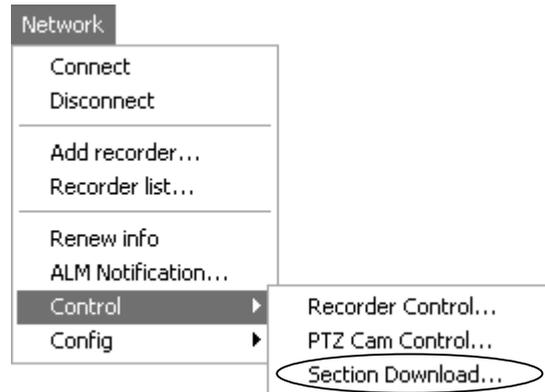

### 5.1 Copying Single Image to a local PC

Single live or playback image can be copied to a user's computer in JPEG format. Go to Edit menu or right click on the video window and open copy command.

### 5.2 Exporting Image File to a local PC

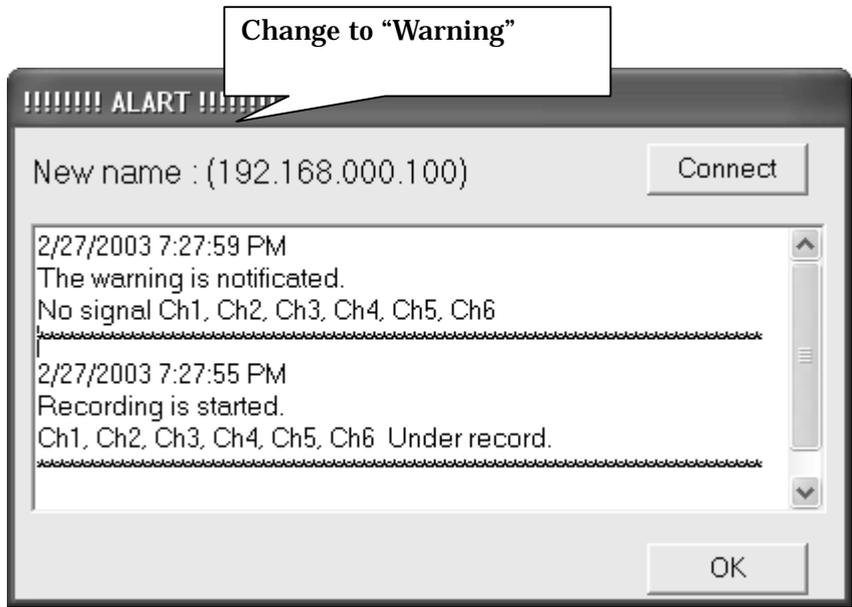

Live or Playback images can be saved to a user's computer in AVI format. Go to Network menu and select control, Section Download. Then the following display appears:

- Input the period that should be transferred from the recorder to your PC.
- Choose the desired cameras you want to download.
- To start downloading, press Download.
- If you want to continue downloading other data, press Continue.
- To cancel the downloading, press Cancel.

6 Alarm notification to a local PC

Alarm notification software, AN25, always runs with Windows and receives alarms from recorders anytime the PC is running. When AN25 receives an alarm, POP UP box appears on the screen automatically.

6.1 Setting up

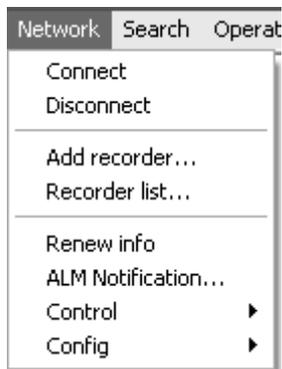

6.1.1 Setting up the recorder

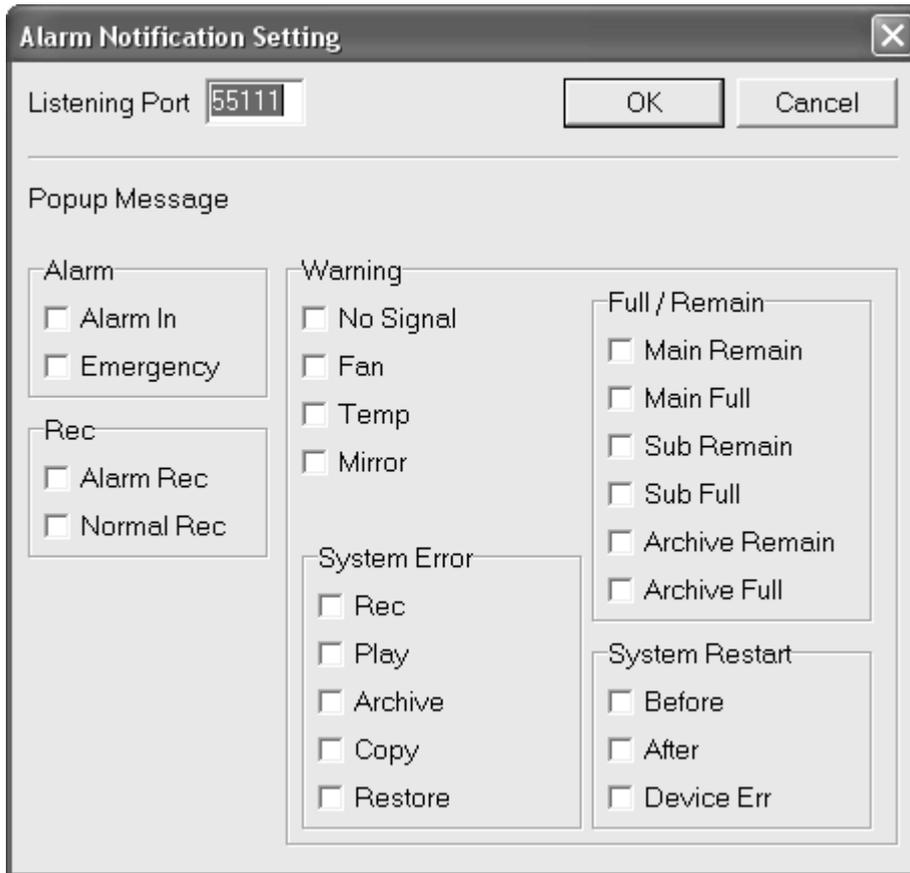

See ETHERNET ALARM NOTIFICATION SETTING in Operation Manual (page 56 and 57)

6.1.2 Setting up DX-PC25U

Go to Network menu and select ALM Notification.

Then the following setting box is displayed. Check each box of any items that need to generate an Alarm Warning. After specifying all required alarms, click OK to start receiving alarms.

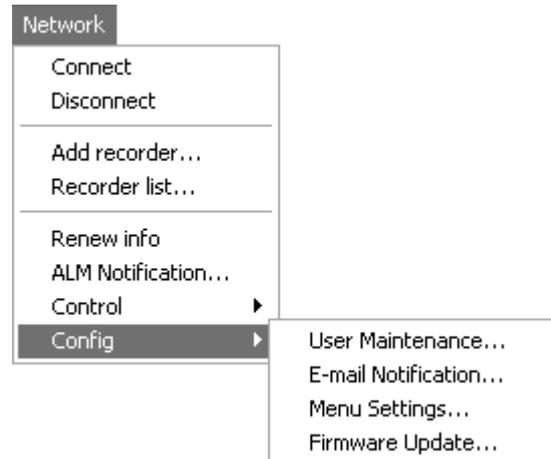

## 7 Alarm notification by e-mail

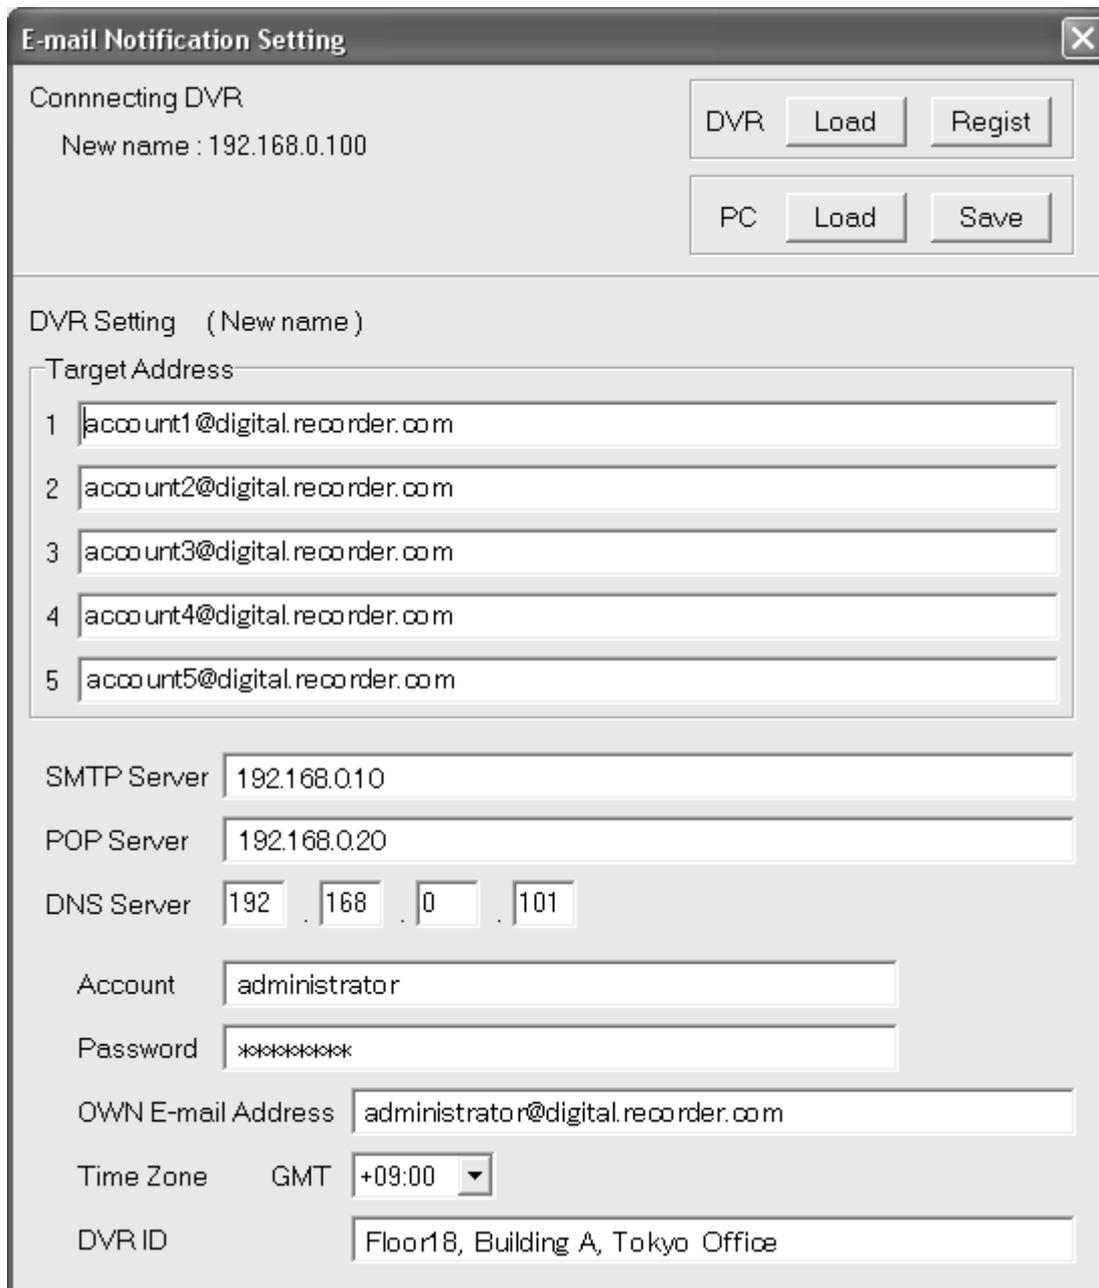

DX-TL2500U can send Alarm Notification by e-mail through SMTP server. DX-PC25U sets up all necessary items of the recorder.

### 7.5 Setting up

From Network menu, choose Config, choose E-mail Notification.

Then the following input box appears.

**E-mail Notification Setting**

Connecting DVR  
New name : 192.168.0.100

Account administrator

Password \*\*\*\*\*

OWN E-mail Address administrator@digital.recorder.com

Time Zone GMT +09:00 ▼

DVR ID Floor18, Building A, Tokyo Office

Target Address (Receiver's address)

Input e-mail addresses of the users who will receive the notifications from the recorder.

SMTP Sever, POP Server and DNS Server shall be determined after contracting with Internet Service Provider or you may need to ask the IT department for detail of setting up the e-mail feature.

e-mail sends the same kinds of alarms as what you set up in Alarm Notification.

---

SMTP Server : Input the address of SMTP server used by the recorder.

POP Server : Input the address of POP server used by the recorder.

Account : Input the account name to log in the above servers.

Password : Input the password to log in the above servers.

Own e-mail address: This mail address is used as the sender's address of alarm mail.

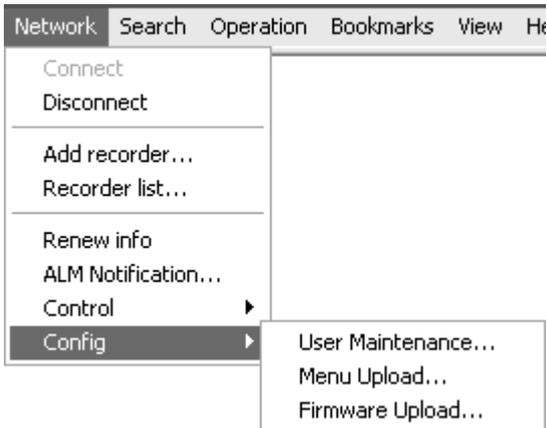

Time Zone : Input the GMT.

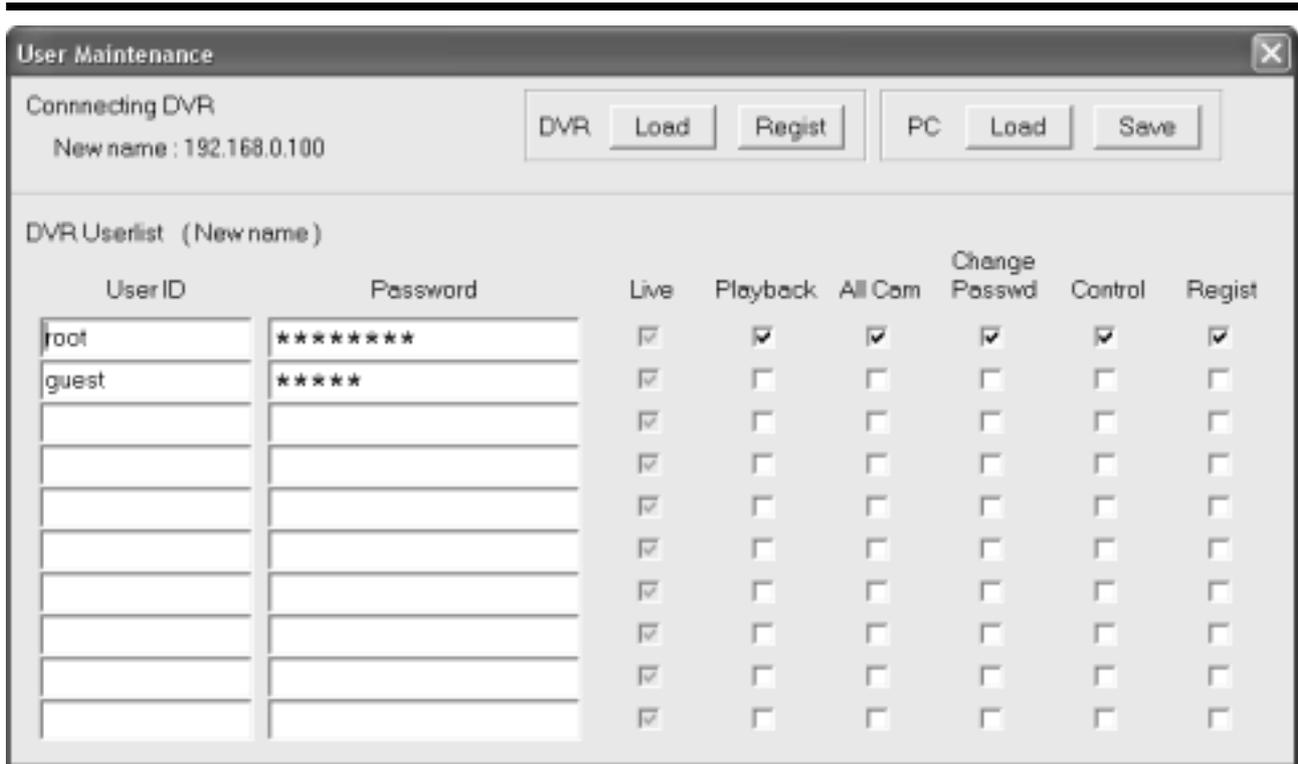

DVR ID : To informed the receivers which DVR sent the alarm email.

## 8 Administrator functions

### 8.1 Setting up a new user and password

New users and passwords can be added to the user list by the administrator and given access rights to certain features. Go to Network menu and Select config and User maintenance.

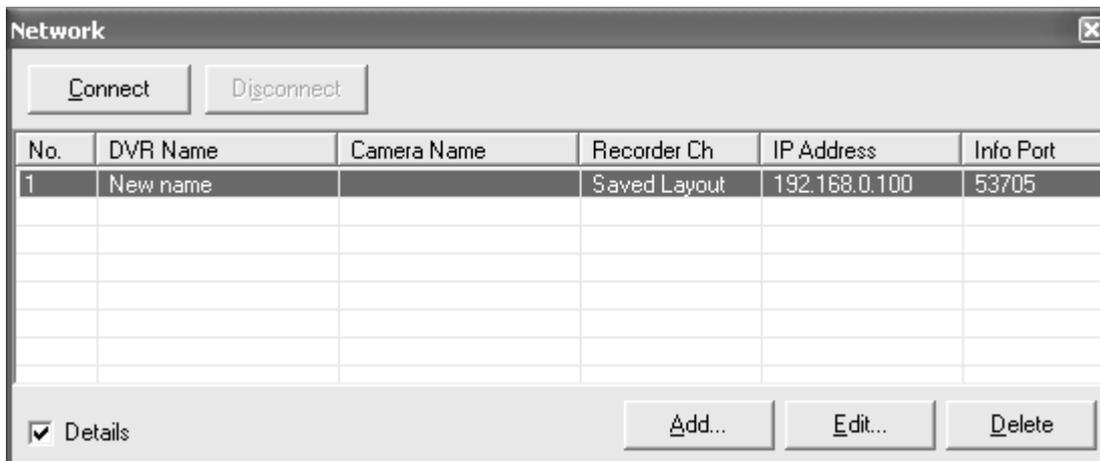

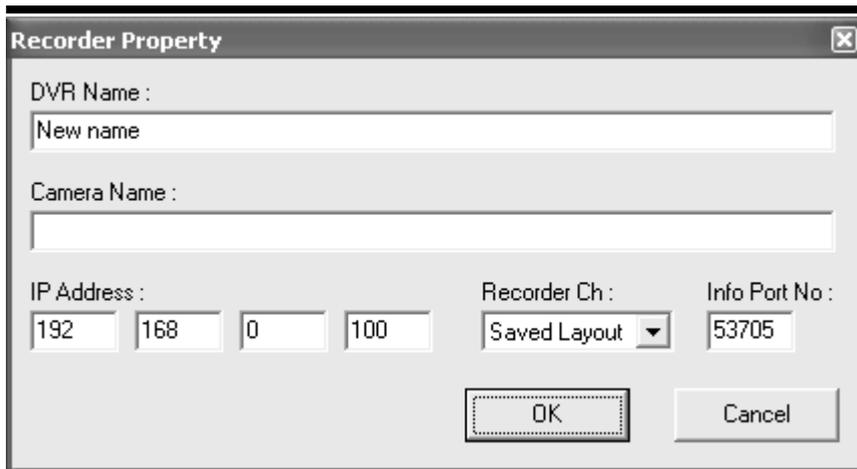

When added or modified, click Regist box of DVR.

## 8.2 Changing the unit name or Adding Sites

Go to Network menu and select Recorder List to display the following box:

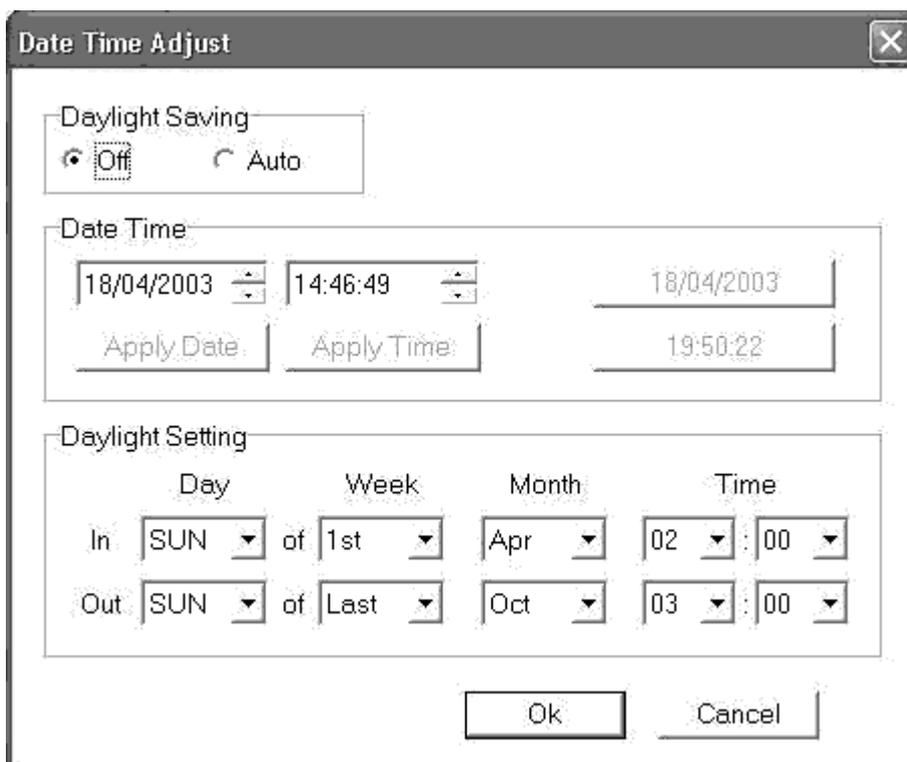

Select either Add or Edit box, and the following box appears:

Change or add DVR Name, Camera Name, IP Address, and

#### 9 Setting up menu of the unit via a local PC

You can adjust the calendar and clock setting of the recorder through a network.

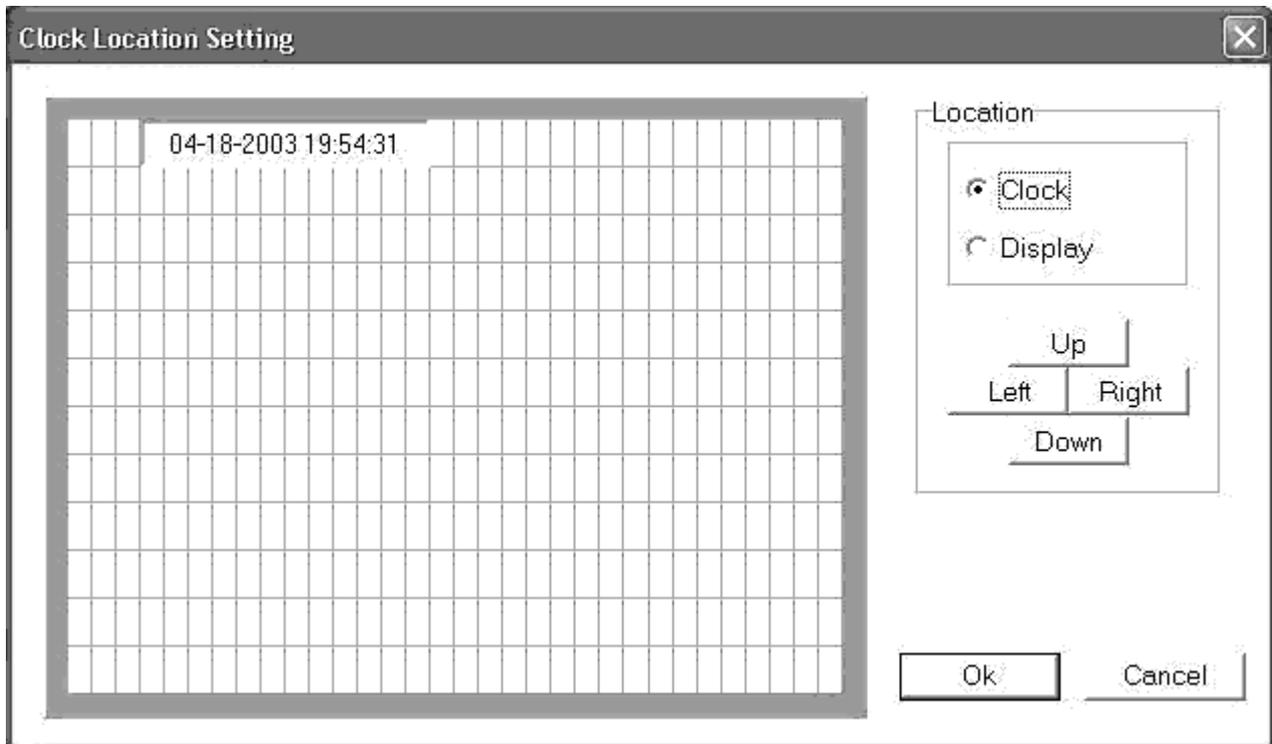

**Daylight Saving Function** : If you set this function ON, clock setting is automatically adjusted at the day when summertime is started or finished.

**Daylight Setting** : Set the begin date&time and finish date&time of summer time.

**Date Time** : To set the new date for the recorder, press Apply Date.  
To set the new time for the recorder, press Apply Time.

To adjust the Calendar position, choose Clock, and set the position by Up/Down/Right/Left keys.  
It is also possible to adjust the horizontal position of Clock and Camera numbers/Titles/Comments.  
To adjust this position, choose Display, and set the position by Up/Down/Right/Left keys.

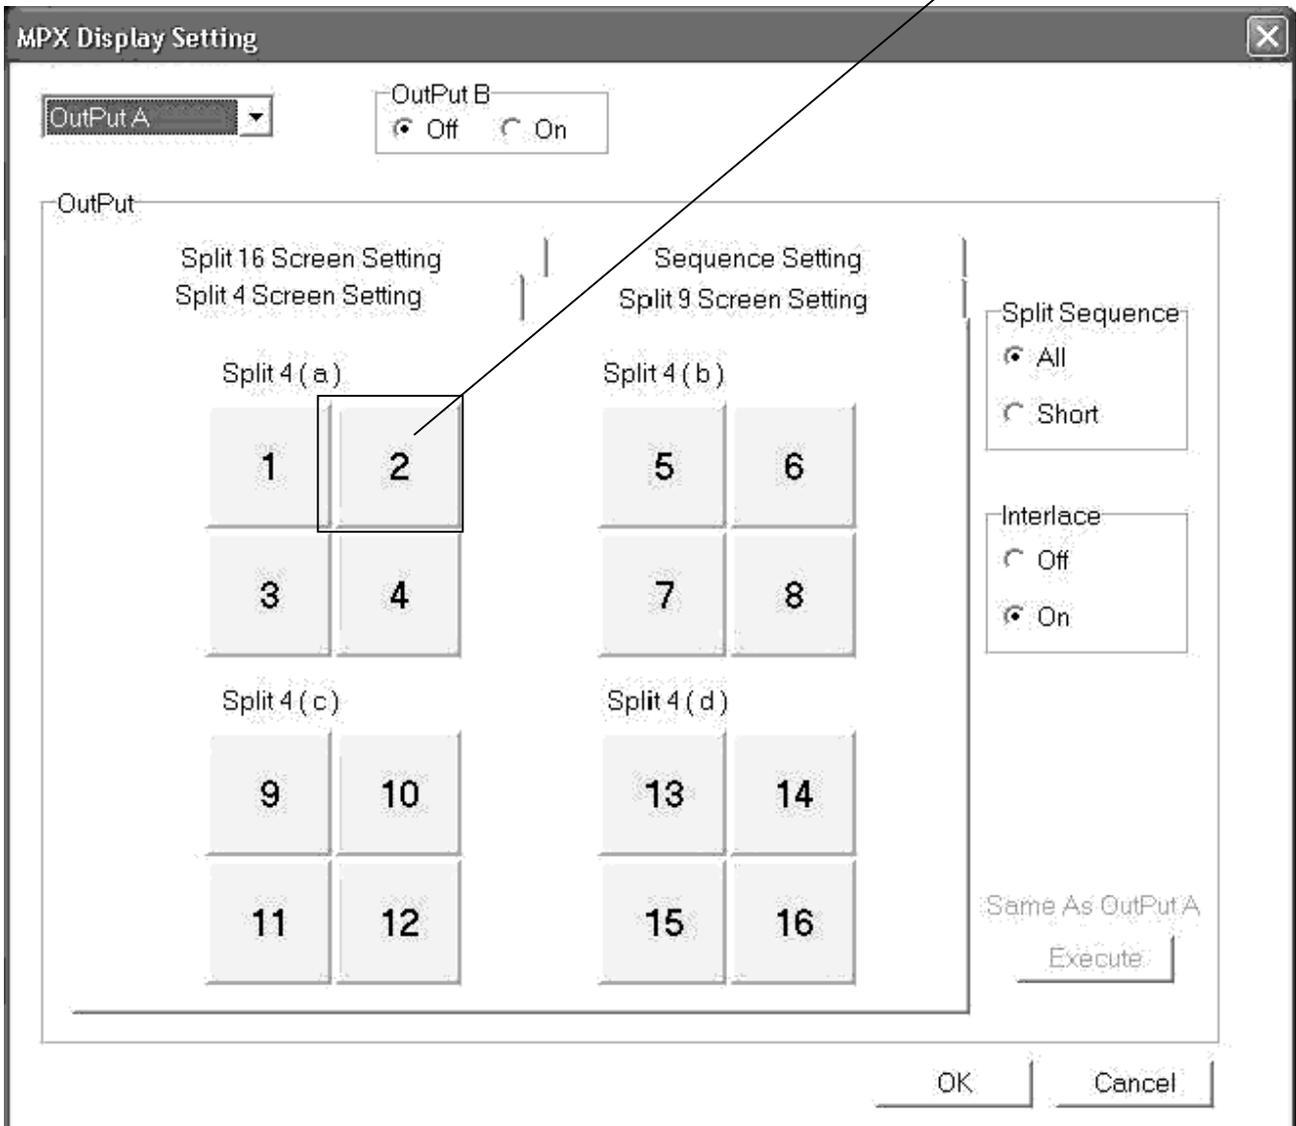

---

You can edit the camera titles from the following box. Only the characters supported by the recorder should be used. To set the camera title, input title and then press apply button.

The screenshot shows a dialog box titled "Camera Title/Menu Setting" with a close button (X) in the top right corner. The dialog contains a list of 16 camera channels, numbered 1 through 16. Each channel has a text input field and an "Apply" button to its right. At the bottom of the dialog, there are two buttons: "OK" and "Cancel".

## 10 Useful functions

### 10.1 Bookmarks

The current playback position can be registered on the bookmark list by saving with bookmark command. Up to 30 bookmarks can be registered. When this limit is exceeded, bookmarks will be erased starting with the oldest bookmark. All the book marks are cancelled when DX-PC25E session is closed.

### 10.2 Help Menu

Help can be displayed by selecting the Help command in the Help menu.

### 10.3 Renew Info and Recorder status

To show the above Status box, put a check mark on Recorder Status.

To get the latest status press Renew Info. button.

You can control the front panel of the recorder from the following box.
